Summary

AI Infrastructure Engineer with hands-on experience building large-scale AI data centers, hardware management systems, and LLM inference pipelines. Skilled in Kubernetes, Python, and bare-metal provisioning, with a research background in computer vision and deep learning.

Work Experience

Gigacomputing Taiwan | *AI R&D Engineer — AI Infrastructure / Networking* Sep 2024 – Present

- Designed and deployed a large-scale AI data center network spanning 8 B200 GPU nodes, 20 CPU nodes, and 20 storage nodes; architected multi-segment network design covering OOB (Out-of-Band) and OS Host networks to ensure isolated management access and robust operational security.
- Incorporated Firewall and VPN into the data center infrastructure, enabling dynamic and on-demand network topology adjustments to support flexible access control and secure remote connectivity.
- Co-developed the Giga Pod Management (GPM) system in Python, integrating Redfish API for server/PDU/CDU hardware management and NVUE for dynamic network reconfiguration.
- Automated bare-metal OS provisioning with MaaS and Ansible; integrated Kubernetes and Slurm into GPM for AI training and inference workload scheduling.
- Developed a containerized Redfish device emulator on Kubernetes to simulate large node counts and stress-test GPM stability.
- Benchmarked SGLang and vLLM; improved LLM throughput ~20% via parameter tuning. Built an AI Chatbot with vLLM + Gemma backed by MongoDB.

Education

Tatung University | *M.S. in Electrical Engineering* Sep 2022 – Jul 2024
Specialized in Machine Learning, Edge Computing, and Object Detection Algorithms

Tatung University | *B.S. in Electrical Engineering* Sep 2018 – Jun 2022

Research

Thesis: Cigarette Recognition Based on Enhanced YOLO | Tatung University, 2024

- Integrated CBAM and SE attention modules into YOLO to improve feature extraction under complex backgrounds, achieving ~16% mAP improvement for smoking behavior detection.

Skills & Languages

Technical: Kubernetes, Docker, Python, Redfish, NVUE, Ansible, MaaS, vLLM, SGLang, LLM, Computer Vision, Proxmox, MongoDB, Git

Languages: Mandarin Chinese (Native) · English (TOEIC 750) · Japanese (Basic)
